DETAILED ACTION

Election/Restrictions

Applicant's election of Invention 1 in the reply filed on May 20, 2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 2 and 3 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 20, 2008.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, it is unclear where the preamble of the claim is deemed to end and the body of the claim begins. The scope cannot be determined because it is unclear what should be given patentable weight, and what is a recitation of intended use in the preamble. The claim will be interpreted as if the preamble ends after "A slide bearing shell".

Claim 1 is replete with limitations lacking antecedent basis. The following limitations lack proper antecedent basis:

-“the back of the shell”

-“the shell”, the claim uses both “the shell and “the slide bearing shell”

interchangeably, it is not clear if these are the same or different.

-“the region of the dividing surface”

-“the dividing surface”

-“the thickness of the shell”

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1, as best understood, is rejected under 35 U.S.C. 102(b) as being anticipated by Roemer et al (US Patent 4,872,248).

Roemer discloses a sliding bearing shell (18) with at least one holding cam (13) which is provided in the region of the dividing surface (12) which extends over only a part of the thickness of the shell (see figure 1), characterized in that the deformation section consists of a tongue (13).

Regarding the limitation that the tongue is cut out and bent partly from the sliding bearing shell through an indentation starting from the dividing surface,

[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

MPEP 2113.

The resultant product of Roemer produces a final structure as claimed, with a tongue protruding from the bearing shell with an indentation (15) that starts at the dividing surface.
